# GitLab Operation

The Base for your agile Toolset

Management of code and containers, continuous integration and continuous deployment - all on one platform for you as a complete service.
Your GitLab is the basis for your agile development!

Benefits

■ Simple code management with comprehensive version management.

■ Meet the highest performance requirements with scalable infrastructure and broadband connectivity to your Setup.

■ Free scalability of CI/CD pipelines through any number of GitLab Runners.

■ Highest data security - All nodes are located in our own certified high-security data centers in Germany.

■ Individual configurations optionally possible.

■ Uncomplicated user administration through optional connection of external authentication systems such as AD or OAuth2.

Highlights

■ GitLab Pages for deployment of websites - also automated

■ Container Registry for storage of container images

■ Installation and operation on a highly available infrastructure

■ Additional enterprise functions and individual configurations optional

■ Locations in our own, certified German high-security data centers

Details

GitLab services are available in many places on the web, but do you want to manage your code where you have put in all your know-how and years of work on a publicly accessible platform? With a GitLab Operation from noris you have the most popular, widespread and probably also best version control system for your code as a secure Managed Service - Made in Germany. Your GitLab system is operated trustworthily and securely by certified personnel in our high-security data centers in Germany. You don't have to worry about anything else and can concentrate on your core competencies. We make sure that your system is always up to date and that incidents are immediately resolved.

The basic package of the GitLab Operation from noris includes the basic installation and operation on a virtual system according to noris best practice criteria. If you have individual requirements, these can of course be optionally taken into account. The performance of the infrastructure is individually adapted to your application and is therefore not included in the base price. The basic package supports the features GitLab Pages to provide static websites, Container Registry to store container images and Continous Integration / Deployment (CI/CD). Further features are possible by arrangement at any time, but may require an Enterprise license.

You can set up an automated build, test or deployment process. Depending on the number and scope, the system can be extended by any number of runners. These are also adjusted to the performance you require with regard to virtual resources such as vCPUs and RAM.

All systems are backed up daily with a retention period of 30 days. If you accidentally delete files, they can easily be restored from the backup.
